AIRLEADER - up to 35% energy conservation

Grand Rapids, MI, —SIGA Green Technologies, announced today the U.S. launch of **Airleader**, a unique air compressor control system. Although an established market-leader in Germany, this energy conservation device is new to the United States. Jan Michael Hoetzel, Director of SIGA Green Technologies, created the proper infrastructure to introduce the Airleader to industries such as automotive, paint, medical, food and others, which rely on the quality of compressed air for their processes and finished products. Compressed air is one of the most expensive sources of energy used in manufacturing. By managing the generation-side of the system, most companies can achieve significant energy savings of up to 35% and more, plus increased equipment performance and life, reduced service costs, and improved system reliability and air quality. Airleader's text message and e-mail alert system provides an early indication of system malfunctions; contaminated compressed air never reaches your finished products, avoiding expensive rework and scrap. The Airleader; easy to install, simple to operate, huge energy savings = cost saving. Interested in your compressed air savings potentials? E-mail us at info@sig-greentec.com or call (616) 828-0716.

SIGA Green Technologies is a business-to-business partner facilitating the introduction of energy efficient products to new markets, predominately in Germany and the United States. SIGA Green Technologies has offices in Grand Rapids, MI, and Karlsruhe, Germany.

For more information, please contact Dipl.-Wirt. Ing. (FH) Jan Michael Hoetzel, (616) 828-1024, or send an e-mail to jan.hoetzel@sig-greentec.com.
